

# VICUT

## CARD CUTTING MACHINE

### CC-580

### PRODUCT PROFILE

The VICUT card cutter is designed for automatic cutting many types of paper cards with fast speed, it is controlled by a micro-computer offering convenient cutting through preset layouts for consistency and ease of use. The interchangeable cutting mould offers more shape according to customer cutting requirements, and the cutting size also can be customized.

Works along with any digital printer, or even digital photocopier, the card cutter CC-580 can produce professionally cut business cards, postal cards, photos, playing cards, cloth tags and so on. Warmly welcomed by the printing shops, DIY photo shops and design companies, thanks to its affordable cost, flexible functions and fast speed.

- | Suitable for A4, A3, A3+, SRA3 card paper from 180gsm-1000gsm
- | Round Corner Cutting for business name card
- | Any Shape acceptable not only for square cutting

# MAIN FEATURES

## Fully automation

Automatic sheet feeding system delivers fully auto process for card cutting.

## Automatic counting

The control system count the cutting times and memory it, to help users better judge the use of knife.

## Fast cutting speed

Cuts 180pcs cards per minute.

## Cuts up to 1000gsm

VICUT CC-580 can cut up to 1000gsm CCP paper without deformation of sharpness of knife and no slow down.

## Customized cutting size

Thanks to the interchangeable cutting mould, the cutting size of the card can be customized according to the user's requirements.

## Support various sheet size

Suitable for paper sheet size A4, A4+, A3, A3+, SRA3, or (297~320)mm x (420~480)mm, capable for cutting different business cards sizes all over the world.

## Simple and safe operation

Built in cutting mould design, to avoid safety hazards. Once sheets ready, one click to start the cutting process, easy to operate even for beginners.

## Efficient and stable cutting system

The cutting blades are self-sharpening and do not require maintenance.

## Image shift compensation

Cut marks registration compensates the offset, ensure that the cutting accuracy will not be affected by material printing error or placement shift.
